

Consistent moisture control for larger birds such as turkeys is provided by the high-flow, rodded paddles and counterflow, chilled water design.

### Standard Features

- Counterflow design produces consistent, gentle chilling
- Field adjustable air agitation provides operational flexibility
- 10-gauge stainless steel tank sections give years of service
- Variable speed controls allow for flexibility in residence time
- Modular construction permits expansion
- Air balancing valves yields superior moisture control
- Optional built-in CIP tank allows for easy cleaning and maintenance
- Stainless steel construction including:
  - Chilling tank
  - Outlet wheel assembly
  - Adjustable feet
  - Recirculating water box

### The Morris Counterflow Design

The Morris Counterflow design gently moves birds in the opposite direction of water flow, creating efficient chilling by ensuring that the coldest birds stay in constant contact with the coldest water.
