

*Safety innovations are always a priority at Morris.
The new Safeside chiller design is a revolutionary safety improvement.*

- Easier Cleaning
- Enhanced Safety
- Elimination of Crush Points
- More Efficient Chilling

SAFESIDE™ Chiller

Safety innovations are always a priority. Often, improvements are relatively small incremental steps, but for our new Safeside chiller design, it is a revolutionary safety improvement. From installation, to operation, to easier cleaning, Safeside delivers enhanced safety. By flattening the chiller wall where the auger descends into the water, the Safeside design eliminates the crush points. In addition, the flat side of the chiller also creates another water passage making chilling more efficient. We are so confident in this new chiller design we are transitioning all of our chiller production to Safeside.
